1.COMPANY INTRODUCTION

Green Oils is a global leader in the energy sector, providing high-quality petroleum and petrochemical products with a strong emphasis on sustainability and innovation. Headquartered in Dubai, UAE, we operate across the Middle East, Asia, and Africa, serving over 30,000 clients worldwide. Our expansive portfolio includes waste oil, base oil, lubricants, EN590 diesel, fuel oil, methanol, naphtha, and various industrial fuels, meeting the energy demands of diverse industries.

At Green Oils, we prioritize not just quality but also environmental responsibility. Our state-of-the-art refining processes are designed to minimize environmental impact, adhering to international standards for safety and sustainability. We are also committed to environmental solutions, offering services for the collection and disposal of sludge, waste oil, oily residues, and bilge water from ships and industrial facilities, fully compliant with MARPOL 73/78 regulations.

Our expertise extends to marine and industrial tank cleaning, ensuring operational efficiency and compliance with environmental regulations. With a robust logistics network, Green Oils guarantees the timely and efficient delivery of products across the globe, empowering industries with reliable energy solutions.

Green Oils is more than just an energy provider—we are a trusted partner committed to driving progress through sustainable practices and innovative energy solutions, ensuring a greener and more efficient future for generations to come.

Commitment to Sustainability

At GreenOils, we are dedicated to minimizing our environmental impact through energy-efficient refining processes, emission-reducing technologies, and recyclable packaging materials. Our advanced Carbon Capture, Utilization, and Storage (CCUS) technologies enable us to reduce greenhouse gas emissions and promote sustainable energy production

Global Reach

With a robust logistics network and a presence in key markets, Green Oils ensures the seamless supply of fuels, lubricants, and refined products to industries and businesses worldwide. Our reliable operations and extensive network enable us to serve clients across the Middle East, Asia, Africa, and beyond.

2. Why Choose Us

Driving Sustainable Innovation in the Petroleum Industry

We are committed to optimizing petroleum usage through innovative solutions, environmental responsibility, and operational excellence. With a focus on cleaner practices and advanced technology, we ensure efficiency without compromising sustainability

We prioritize green technologies to reduce emissions and protect the environment.

Strength:

- Our facilities and logistics are built for durability, reliability, and peak performance.
- We invest in R&D to stay ahead with smarter, more efficient energy solutions.
- We prioritize green technologies to reduce emissions and protect the environment.
- To deliver high-quality oil products with speed, safety, and service excellence, while maintaining sustainable and ethical business practices
- Consistent Product Quality: Our oils meet international standards, ensuring optimal performance and equipment protection.
- Fast & Reliable Delivery: We maintain a well-managed inventory and transport system for same-day or next-day delivery.
- Experienced Team: Skilled staff in logistics, accounting, and client services ensure seamless operations.

3.WORK FORCE

Our strength lies in the passion, expertise, and dedication of our experts. Together, we drive progress, innovation, and lasting impact in oil manufacturing and petroleum trading. Our experts brings together a wealth of experience, strategic vision, and industry expertise, driven by passion, dedication, and innovation to ensure sustainable growth across all facets of our operations.

4.OUR SERVICES

We provide end-to-end oil and gas solutions — from exploration and refining to packaging and global distribution — ensuring energy reliability, quality, and performance at every step. We deliver consistent, high-quality petroleum and petrochemical products to power industries and communities worldwide. Our commitment to innovation, sustainability, and safety ensures we meet today's energy needs while shaping a cleaner, brighter future.

- We provide a wide spectrum reception facility for sludge, waste oil, oily residues/bilges, etc. to the vessels calling at all major Ports of UAE & Anchorage.
- Collection and Disposal of Sludge/Slope/Bilge Water wash in compliance with IMP Approved standards (MARPOL 73/78). We are economical and prompt in our work commitment.
- We offer complete marine tank cleaning services, including shore storage, onshore, offshore, and engine room tanks.
- We are the leading service providers for the Used Oil trading department, buying and selling all kinds of used engine oil, and used motor oil originating from cars, trucks, Buses, most automobiles, boats, ships, heavy vehicles, cranes, and hydraulic machinery.

Empowering Progress with Clean Energy Solutions

Empowering progress through innovative clean energy solutions. We provide sustainable, efficient alternatives to help industries reduce their environmental impact. Committed to a greener, more sustainable future

1. De-Slopping – Disposal Of Sludge/Bilge From Ships And Vessels

At Green Oils, we are dedicated to providing an extensive range of reception facilities tailored to the needs of vessels calling at all major ports of the UAE and Anchorage. Our services include the efficient collection, handling, and disposal of sludge, waste oil, oily residues, bilges, and other related waste products generated during maritime operations. Understanding the critical importance of maintaining environmental compliance and operational efficiency, we deliver our services with the utmost precision and professionalism

Our extensive network covers all major UAE ports and Anchorage, enabling us to provide timely and responsive services that accommodate the demanding schedules of global shipping operations. Whether it's routine waste disposal or emergency response, Green Oils is equipped to handle it all with reliability and expertise.

2. Marine & Industrial Oily Waste Collection & Disposal

At Green Oils, we specialize in the collection and disposal of marine and industrial oily waste, providing efficient and environmentally responsible solutions across all major ports and industrial zones of the UAE. Our comprehensive services are designed to meet the stringent environmental standards set by both local authorities and international maritime regulations, ensuring the proper handling and disposal of oily residues, sludge, and waste oil.

We recognize the challenges faced by marine vessels and industrial facilities in managing oily waste safely and effectively. With our state-of-the-art reception facilities and a team of highly trained professionals, we guarantee seamless collection, transport, and processing of hazardous materials, minimizing environmental impact and preventing contamination of marine ecosystems and industrial environments.

3. Vessel Marine Tank Cleaning/ Industrial Storage Tank Cleaning

At Green Oils, we offer expert Vessel Marine Tank Cleaning and Industrial Storage Tank Cleaning services designed to maintain the highest standards of cleanliness, safety, and environmental compliance. Utilizing advanced cleaning technologies and eco-friendly methods, our team ensures thorough removal of sludge, chemical residues, and contaminants from marine and industrial tanks. Our specialized cleaning process not only restores tanks to optimal conditions but also enhances operational efficiency and extends equipment lifespan.

At Green Oils, we provide efficient and eco-friendly Vessel Marine Tank Cleaning and Industrial Storage Tank Cleaning services, ensuring safe removal of sludge, residues, and contaminants, while maintaining strict compliance with environmental standards. Our advanced cleaning techniques guarantee optimal tank performance and extend equipment longevity, contributing to safer and more sustainable operations.

4. Black Fuels & Petroleum Products

- **Fuel Oil**

The raw, unrefined petroleum extracted from underground reservoirs. It serves as the base for producing all petroleum products, including fuels and petrochemicals.

- **Residue Oil**

A thick, heavy fuel derived from the distillation of crude oil. Ideal for industrial heating and marine fuel applications, offering stable, energy-dense combustion.

- **Waste Oil**

An industrial heating fuel used in boilers, kilns, and furnaces. It meets local environmental and combustion efficiency standards.

- **High Sulphur Diesel / D2**

A cost-effective solution for heavy-duty engines and equipment in sectors where low emission regulations are not mandated.

- **Aromatic Oil**

High-aromatic content oil used in chemical processing. Valued for solvency and stability in industrial applications.

- **Base Oil**

The foundation of lubricants. Provides oxidation stability and viscosity control for automotive and industrial used
