The company keep continuing innovation around customer needs, increasing investment in product research, accumulating efforts and promoting industry progress and compete with global market

Bee's Product

- * Honey Bee
- * Beeswax
- * Beeswax Foundation
- * Royal Jelly
- * Bee Pollen
- * Propolis
- * Beekeeping Equipment
- * Bee colony

"Genuine with premium quality product is our motto"

Honey Bee

we set very strict operational standards starting from beekeeping techniques until post-harvest handling. We assure for cleanliness and hygienic during the proses.

Acacia

Crassicarpa

Acacia crassicarpa honey produced by superior bees (*Apis mellifera*) which herded in acacia forest

the process, the bees take nectar for honey in every dew base on the young leaves of the acacia plant

Acacia plants keep continues releasing nectar throughout the year that makes acacia honey is the most stable supply for all season

The taste of Acacia crassicarpa honey is a soft sweet with a fresh sour, this is typical of nectar amber to dark amber

Acacia Mangium Honey

As an *Acacia crassicarpa* honey, it is produced by superior bees (*Apis mellifera*) which herded in mangium forest

This type of *Acacia* has a wider leaves, bees also take nectar for honey in every dew base on the youngest leaves

Acacia mangium releasing nectar for all season, because of limited herded land area for *Acacia mangium*, the supply honey for *Acacia mangium* not as much as *Acacia*

Acacia mangium honey has a sweeter and softer taste with slightly lighter colors, from amber to light yellow

APIS DORSATA

Apis dorsata is a wild bee that nests in higher trees and cliffs. Apis dorsata bees has not cultivated yet, the colonies migration from one place to another

Apis dorsata honey is obtained from searching. Our searching locations include Sumatran area, West Java to East Nusa Tenggara forest. It is classified as multiflora or multiflora dominant with certain nectars.

Our supply includes coconut nectar, acacia, rubber, coffee, durian and eucalyptus spp.

The characteristic of Apis Dorsata honey is watery, fragrant and has a different taste in different harvest seasons.

BEE POLLEN

BEE POLLEN is the pollen of male flowers that taken and collected by honey bees, nowadays bee pollen become popular because of the benefits are good for the health of the body.

The rich of nutrition makes bee pollen known as a superfood.

We provide bee pollen from oil palm and corn plant pollen.

ROYAL JELLY

Royal jelly is a substance secreted by worker bees for feeding the queen bee and honey bee larva.

Royal jelly contains a million benefits for health. The royal jelly we sell is 100% pure natural royal jelly.

Avoiding spoil product, royal jelly should keep in cold temperature storage.

Beeswax

BEESWAX APIS MELLIFERA

Beeswax apis mellifera from superior apis mellifera's bees.

Currently our company able to supply beeswax up to 2-3 tons per month

BEESWAX APIS DORSATA

Similar to apis mellifera beeswax, apis dorsata wax tends to variety colors, very suitable for cosmetic raw materials, pomade and industries that require natural wax.

STINGLESS BEE HONEY

More variants and different types of bee species

STINGLESS BEE HONEY, MELIPONINI HONEY

MEDICINAL HONEY GRADE

TETRAGONULA CF BIROI

The smallest species but very productive. Tetragonula biroi one of the trigona that produces a lot of honey, this trigona is endemic to the island of Sulawesi

The method of harvesting this type of bee by draining it without using a vacuum like Trigona Itama, this method makes honey with rich nutrients and a good benefit for health.

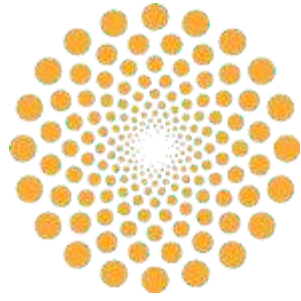

HETEROTRIGONA ITAMA

Heterotrigona itama one of the most widely cultivated types of trigona bees.

Our farmers reached 7000 productive hives spread across Sumatra, Bangka, Belitung and Kalimantan.

Trigona honey already contains propolis in it because the honey bag used to store honey of propolis which causes polar substances in propolis to dissolve into the honey.

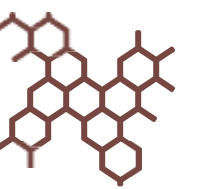

TETRIGONA APICALIS

Different from other types of trigona bees, the bees build their entire nests using resin wood or meranti and makes the honey has a very fragrant and strong aroma.

Tetrigona honey character is high water content and very sour.

RAW PROPOLISTRIGONA

We provide raw propolis with a high yield from propolis geniotrigona thorachicaThe propolis can be used as an ingredientraw liquid propolis or other needs.

BEEKEEPING EQUIPMENT

We provide various kinds of beekeeping equipment; sheepskin gloves, brooms, levers, queen cage smokers, queen bowls, grafting pencils, insulation etc

RAW PROPOLISTRIGONA

provides various kinds of flea medication, ranging from fluvalinate strips, amitraz ampoules etc

We manufacture a nest boxes, nest frames and beeswax foundations
