3

FOR XIAOMI MIJIA  
M365/1S/PRO1/PRO2/MI3

An aerial photograph of a city at sunset. The sun is a large, bright orange-yellow orb in the upper left, casting a long, warm glow across the sky and the city below. The sky is filled with dark, dramatic clouds. The city is a dense collection of buildings and trees, with some taller structures visible in the distance. The overall mood is serene and majestic.

# Part 04 MONORIM STORY

## Monorim history

In 2013, Zheng Jiezhong was employed by a well-known multinational design company, engaged in the industrial 3D design of electric station solidworks. During his station design, there were many successful cases such as government charging stations. During the station design work, Zheng Jiezhong also made a conceptual design for his two-wheeled green car as an amateur, so he designed a two-wheeled balance car. At that time, there were no products of balance car scooter brands such as Segway.

In May 2015, Chinese domestic brands of self-balancing scooters came on the market one after another, the most famous of which was NINEBOT's one-year boom in the market in China. Zheng began to help China's self-balancing scooters (now manufacturers in the scooter industry) provide special structural designs. During the project work, many unique products appeared, and in the same year, they were deeply loved by foreign consumers in the Chinese market. In the same year, Zheng designed a unique vehicle brand named monorim, the first green scooter in China. In this year, the product has won praises from European and American consumers due to its uniqueness, appearance, and power differences. Therefore, MONORIM products have been selling wildly in those years, and the supply is in short supply. At the same time, it has reached the recognition of the entire industry chain.

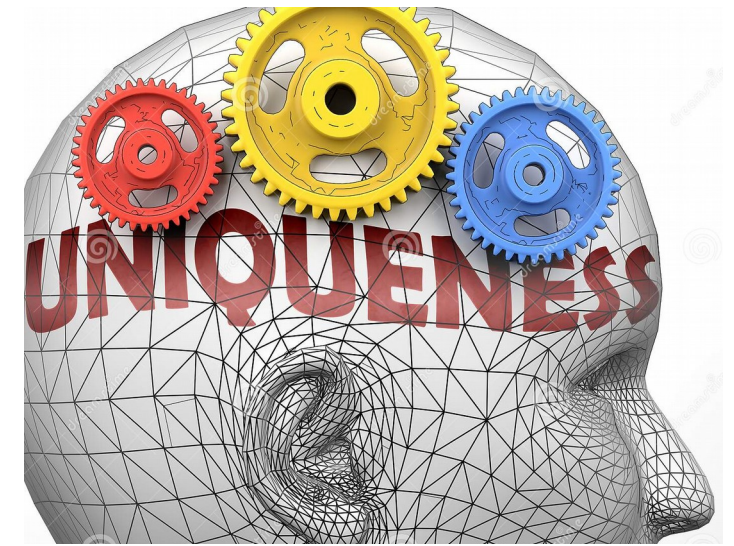

In October 2016, the monorim brand officially entered the electric scooter, and began to adhere to the design concept of unique products,

From May 2018 to May 2019, the sales of scooters slowly became numb in the market, and consumers were already fatigued, so Zheng decided to attack the field of scooter modification, and insisted on his belief: "Scooters need a unique sense of superiority and the concept of self-enjoyment fun. "

Products are not only products, but also the embodiment of personal spiritual superiority.

So the first product designed was the M0 Xiaomi front shock absorber, which was recognized by the market as soon as it came out, and was praised by fans all over the world.

Starting in March 2020, Zheng felt that many scooters designed in China lacked the performance, safety, and cool features pursued by Europe and the United States. He began to recruit international and domestic design teams to conduct research on scooters around the world and insist on scooters. This unique feature has continuously designed and created the modification and upgrade of components for international brand cars. Until October 2021, 96 projects (upgrading and modification parts of xiaomi segway HX and other brands) have been circulated in the market, and have a wide range of products. spread

Unique Creation
