Lubricant Precautions Mote

- 1. Our worm gear reducers have been fully filled with synthetic lubricant before leaving the factory, and the products are free of lubricant replacement, and the lubricant can be used for unlimited times after being filled from the factory. (Mineral oil filled with low-end products, after using 1000 hours need to replace the new oil, and according to the requirements of the manual for regular a -ddition and replacement.)
- 2. Our products are fully sealed and maintenance-free, of which CYRV (ordinary models) to prevent oil leakage during transportation, the oil filling holes have been sealed with flat oil plugs, which do not need to be loosened when in use.
- 3. If the lubricant is replaced, it should be used in accordance with the requirements in the table. Different types of oils are prohibited from being mixed, and oils with the same type but different viscosities are allowed to be mixed.
- 4. Lubricant filling quantity is according to the attached table, and the recommended lubricant type is according to the attached table.
- 5. The worm gearbox in this manual can be allowed to apply to the working environment temperature is $-20^{\circ}\text{C}^{\sim} +40^{\circ}\text{C}$. When the environment temperature is lower than 0°C , the lubricant must be heated to above 0°C before starting or the lubricant with low freezing point should be used.
