## Madaline® Mikrofilament Fabric

MADALINE fabric is a durable and lightweight material made of thin filaments. It has high absorbency, stain resistance and anti-bacterial properties. It is patented by the North Carolina State University in the USA and produced with the latest microfilament technology. It prevents bacterial growth and acts as a bacterial filter with its 20-micron surface. Madaline Mikrofilament Fabric is odorless, non-bacterial, anti-allergic and eco-friendly. It is used to produce products such as cleaning cloths, kitchen towels, glass cloths and beach towels. It is also preferred in many areas such as cleaning, home textile and sports equipment. Madaline Mikrofilament Fabric is an excellent choice for those who seek quality and innovation.

Anti-Mite

*Madaline® Mikrofilament Fabric provides a protective layer against dust mite allergens, keeping dust mite allergen particles under the fabric layer and preventing contact with allergy sufferers.*

Breathable

*They are extremely thin microfilaments that create millions of "micro" channels through which air can flow, with their breathing structure. Water, sweat dry very quickly and remove moisture from the skin.*

Eco - Friendly

*They are long-lasting materials that help reduce the impact of waste on our environment. No binders, solvents or PVC are used in the production of Madaline® Mikrofilament Fabric.*

Economical

*With exceptional long-lasting performance and affordable products, Madaline® Mikrofilament Fabric products are excellent value for money.*

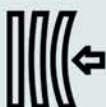

Customizable Print

*The fabrics we use have the feature of customizable printing. Whether you choose your own design or a ready-made pattern, Madaline® fabrics will look perfect on it.*

Washable

*White textiles based on Madaline® Mikrofilament Fabric technology can be washed many times at temperatures up to 95°C and are not deformed due to washing.*

Strong and Stable

*Madaline® Mikrofilament Fabric does not lose its shape or uniformity even after intensive use and multiple washing cycles, with the mechanical properties of very strong and isotropic structure.*

Unique Look

*Madaline® Mikrofilament Fabrics have a unique matte surface. Its original designs and modern printing techniques combine with its microfilament structure, making it unique.*

## With Microfilament, Style is With You Everywhere!

Microfilament produces microfilament fabrics that you can use safely with your home, office, car, beach, and pets. Microfilament fabrics are made of thin and durable fibers and are stain-resistant, easy to clean, quick-drying and antibacterial. Microfilament fabrics are available in different colors, patterns and textures. You can choose the fabrics that reflect your own style and beautify your home and living spaces. With Microfilament, style is with you everywhere!
