About Us

Didar Asia is a trusted name in the middle east and GCC region with a number of success stories over a decade. Didar Asia provides comprehensive life support services to the United States government, its coalition forces, department of defense (DOD) and civilian contractors. Services we provide include:

- Construction, maintenance & renovation of buildings
- Janitorial Services
- Lease and Sales of Vehicles & Machinery
- Base Life support services (Sponsorship & Visas, Housing)
- General Trading - PetroChemicals - Raw Materials

Our Mission

is to provide on-time services with quality to government agencies and private industries at a competitive cost. We aim to capitalize on our 12 years of experience and established infrastructure in GCC & other regions, to offer integrated and cost-effective solutions.

OUR SERVICES AND PRODUCTS

INFRASTRUCTURE

Didar Asia Construction Department manages a wide range of projects in such areas as, Military Compounds, Infrastructure, Heavy Civil Work, Power Plants and Power Transmission Lines throughout Afghanistan, Iraq, Bahrain and other Middle Eastern and South Asian Countries. Our construction department consists of professional Engineers who manage and coordinates over multimillion-dollar projects with clients such as; US Forces, PRTs, USACE, AFCEC, KBR, PAE, UN and USAID. Didar Asia Construction team schedules and coordinates all design, construction and quality control processes to ensure a productive and safe work environment is achieved. All DAGT LLC Project Managers plan and systematize efforts to accomplish a successful project within the time and budget; and are often responsible for multiple projects at a time. It is due to outstanding teamwork and coordination of our departments that DAGT LLC successfully completed challenging projects in such remote areas.

OUR SERVICES AND PRODUCTS

CONSULTING ENGINEERING

Our consulting engineering is a professional service that provides independent expertise in engineering, science and related areas to government, industries, developers and construction firms. This includes but not limited to A/E, dam design, QA/AC, mining investigation, construction management, urban development.

WATER AND WASTEWATER

DAGT LLC technicians at the water and wastewater department carry out laboratory tests for water and wastewater using modern lab equipment. We also provide engineering services for design, implementation, and maintenance of water and wastewater infrastructures and plants

TUNNEL/ROAD ENGINEERING

Constructing a tunnel is one of the most complex challenges in the field of civil engineering. Many tunnels are considered technological masterpieces. DAGT LLC has employed experts in the field of road and tunnel covering all phases of tunnel and road design and engineering.

OUR SERVICES AND PRODUCTS

PROJECT MANAGMENT

Pre-Bid & Post Bid-Management Services, Procurements, Construction Supervision & Contract Management for Turnkey Projects). Didar Asia through it's associates is highly committed to helping clients' manage their risk and uncertainties of construction.

Following services: Following services can be provided and can be tailor-made suiting client requirement:

- Project Bidding
- Contract Negotiations
- Project Planning
- Project Budgeting & Cashflows
- Procurements
- Vendor & Subcontractor Finalization
- Handling Complete Client Interface
- Shipment Coordination
- Project Commercials
- Advising Clients on Periodical Site Progress Review Meetings
- Preparation of EoT & Related Claims
- Advising Clients on ROW Issues
- Supervision Services for Commissioning & Handing Over of Project Facilities

OUR SERVICES AND PRODUCTS

TECHNICAL SERVICES

Didar Asia provides the Technical Services w.r.t. Preventive and general Maintenance for all the leased vehicles & machineries deployed by us on various project sites. All the technical support services are supported by our technical services team.

PREVENTIVE MAINTENANCE

Preventive Maintenance is a schedule of planned maintenance actions aimed at the prevention of breakdowns and failures. The primary goal of preventive maintenance is to prevent the failure of equipment before it actually occurs. Preventive maintenance activities include equipment checks, partial or complete overhauls at specified periods, oil changes, lubrication and so on.

General Maintenance (Scheduled)

We will provide basic Maintenance for your equipment such as mechanical repairs, electrical repairs, hydraulic repairs, tire repairs, washing, etc.

Major Repair (unscheduled)

We have the capability to perform major repairs and supply spare parts and services under our guarantee to meet customer requirements.

Maintenance & Upgradation of Facilities:

Didar Asia has developed an expertise in implementing facilities upgrades from building upgrades, furniture add-ons, building of storage areas, reassigning new facilities, Didar Asia also carries out Operation, maintenance and renovation of existing facilities. Didar Asia has the team that has done the job and done it well.

Administrative support services to process application, obtaining approval, and issuance of visas and permits

OUR SERVICES AND PRODUCTS

RECRUITMENT AND DEPLOYMENT

Didar Asia specializes in recruitment of skilled and unskilled workforce including identifying, screening, selection and deployment of suitable candidates for jobs (either permanent or temporary) as per the applicable labor norms of the Host Countries.

All the background checks are carried out prior to deployment at project sites.

TRAINING & DEVELOPMENT

Delivering personal, professional & bespoke training to organizations worldwide.

Personal Development: courses and coaching sessions designed with your personal growth in mind

Professional Development: training and development opportunities to empower employees to work better together and gain the knowledge necessary to do their jobs with more confidence and more efficiently and effectively

Bespoke Training: customized training programs to meet your specific requirements

OUR SERVICES AND PRODUCTS

Short & long term cost-effective leasing and rental services

SPECIALIZED VEHICLES

Didar Asia offer a full range of customized armored vehicles (Level B3 to B7 armoring standards), customized ambulances with required level of life support to fit the specific needs of our clients.

MACHINERY

Didar Asia offers rentals of heavy equipment and material handling such as, Forklift, Trailer and other equipment from 1 day to 5 years with / or without driver/operator, scheduled service and maintenance according to your project need. Our rental agreements are flexible, and tailor made for the customer's specific requirements. Long Term rentals give you all the benefits of use without any risks of ownership. Short-term rental solutions can help customers react immediately to a situation with a predicted cost.

We provide a single point of contact and simplified fleet management.

VEHICLES

In today's highly competitive rental industry, market need to rely on a cost effective and reliable source of vehicles to help them operate customers business professionally and successfully. Didar Asia fleet consists of a wide selection of the latest model vehicles covered by full comprehensive insurance from Chevrolet, GMC, Ford, Mitsubishi, Toyota, Nissan, from small sedans to SUVs and commercial vehicles. - This not only offers a choice of vehicle types but also an attractive brand choice within each type to accommodate various missions. Our vehicles are readily available in, Afghanistan, UAE and other countries with delivery service for all military bases. Our aim is simple - to provide the customer with the right vehicle at the right price, at the right time, giving the best service in the industry, for customer satisfaction and repeat business.

OUR SERVICES AND PRODUCTS

Administrative support services to process application, obtaining approval, and issuance of visas and permits

SPONSORSHIPS

As one of our principal Services, Didar Asia has the ability and experience to provide all administrative support necessary to validate and/or legalize your employees eligibility for residency Visa in Afghanistan, UAE, Iraq, Jordan and GCC Countries enabling the employees to work legally in these countries ensuring mission success.

Administrative support services include, but are not limited to facilitating application for, processing of, obtaining approval of, and securing the issuance of the following:

- Single Entry Visas valid for 30 days from date of entry
- Issuance of Multiple Entry Visas (MEV) from Afghanistan
- Extension of Multiple Entry Visas (MEV)
- Issuance of Work Permits
- Cancellation Of Multiple Entry Visas (MEV)
- Tourist Visa and Commercial Visa will be valid for entry for 90 days of issue and then for a stay of up to 30 days only after entry.
- Transfer Work Visa from previous sponsor to Didar Asia.
- Work Visas enabling the employees to work in GCC Countries as part of the
- Project workforce which will be valid for 1 or 2 years and renewable.
- Meet and Greet Services

OUR SERVICES AND PRODUCTS

HOUSING

Didar Asia is proud to offer many options in accommodation service leases in a wide variety of sizes, locations, and amenities to suit the requirement of our clients w.r.t. configuration, facilities and budget

The accommodation leasing services can be offered both on long-term and short-term basis.

Accommodation can be fully furnished or unfurnished as per client requirement

Accommodation can be apartments, villas, hotel suites as per requirement

Configurations: Studio apartments, 1BR-2BR-3BR-4BR

Apartments-Villas-Suites

Special Services viz: w.r.t convening of meetings - conferencing can also be provided

RELOCATION

Peace of Mind: we understand the challenges related to relocation and we strive to make you feel at home in your new location

Care and Protection: we take steps to protect your belongings from pick-up to delivery

24/7 Customer Service: your calls to customer service team are answered around the clock

International Moves: we support international moves and can help your assignment programs

Cutting Cost managing exceptions and reducing relocation costs

OUR SERVICES AND PRODUCTS

LOGISTICS

In the defense industry, movement and storage are absolute key to the survival of troops and military operations in remote locations.

Didar Asia has a fleet of trucks and cars that it regularly deploys on missions within the region.

Didar Asia also works with key partners to provide with logistics support that comprises of movement of troops, movement of goods, manpower supply, fuel support and medical support

This helps companies allocate their resources towards their area of specialization while Didar Asia takes care of all the administrative challenges that come with a new operation in a new country.

Specialize in movement and storage in GCC and other regions

PRODUCTS

FERTILIZERS

Urea is commonly used in agriculture as a fertilizer and an animal feed additive. The primary function of urea fertilizer is to provide nitrogen to plants to promote green leafy growth and make the plants appear lush. it's primarily used for bloom growth.

GRANULAR & PRILLED UREA

P. Urea is white, solid, odorless or slightly ammoniacal, water soluble, produced in both granular, prills, or pastilles with nitrogen content of %46 . Urea is the most popular and economical of all nitrogenous fertilizers being used worldwide, the highest nitrogen concentration in the available solid conditions.

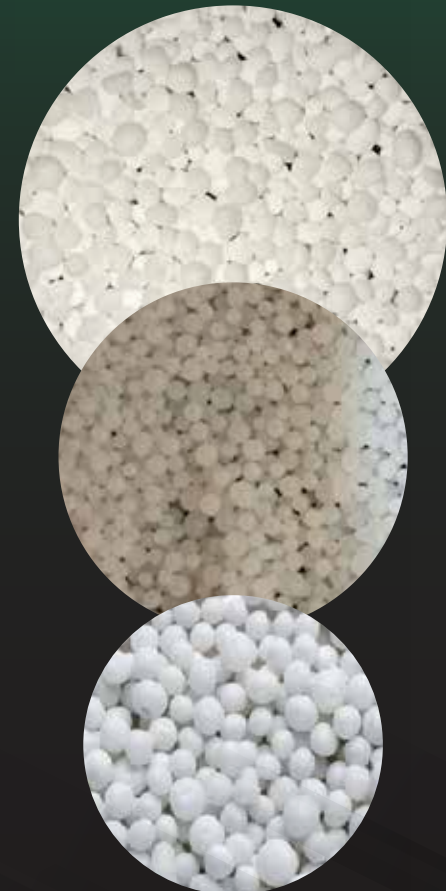

TECHNICAL & AUTOMOTIVE GRADE UREA

TGU is a high purity source of nitrogen and is commonly used in the industrial sector

Packaging:

- 1000kg jumbo bags
- 50Kg

UREA %46

FERTILIZERS

Potassium sulfate, often referred to as sulfate of potash (SOP), is a type of fertilizer that provides essential nutrients to plants. It contains both potassium and sulfur, and its chemical formula is K_2SO_4 .

Composition: Potassium sulfate consists of potassium ions (K^+) and sulfate ions (SO_4^{2-}). The potassium in this fertilizer is in the form of sulfate, making it readily available for plant uptake.

Nutrient Content: The primary nutrients in potassium sulfate are potassium (K) and sulfur (S). Potassium is essential for various plant functions, including enzyme activation, water regulation, and overall plant health. Sulfur is important for amino acid formation and is a component of certain vitamins and coenzymes.

Solubility: Potassium sulfate is typically water-soluble, allowing for easy application through irrigation systems or as a foliar spray.

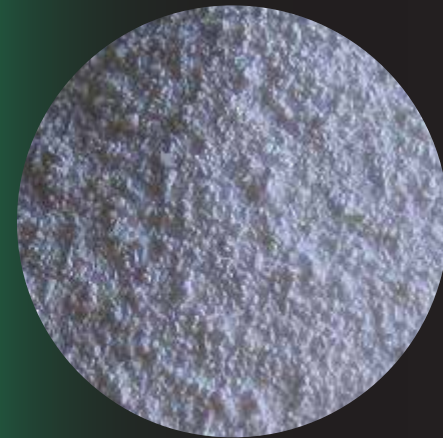

Use as Fertilizer: It is commonly used as a fertilizer to supply potassium and sulfur to plants. Potassium is particularly crucial for flowering, fruiting, and overall plant stress resistance.

Soil Amendment: Besides its use as a fertilizer, potassium sulfate can also serve as a soil amendment to correct potassium deficiencies in the soil. It can be especially beneficial in soils that require additional potassium without adding excess levels of other nutrients.

Packaging:

- 1000kg jumbo bags
- 50Kg

SOP

FERTILIZERS

NPK refers to the essential nutrients that plants need for healthy growth. It stands for Nitrogen (N), Phosphorus (P), and Potassium (K), which are three primary elements found in fertilizers.

These elements play specific roles in supporting different aspects of plant development:

Nitrogen (N): Nitrogen is crucial for the synthesis of proteins, enzymes, and chlorophyll, which are essential for plant growth and photosynthesis.

Effects: Promotes leafy, vegetative growth. Improves the overall green color of plants.

Phosphorus (P): Phosphorus is involved in energy transfer, root development, flowering, and fruiting. It is a key component of DNA, RNA, and ATP (adenosine triphosphate).

Effects: Promotes strong root development, improves flower and fruit formation, and enhances overall plant vitality.

Potassium (K): Potassium is essential for the activation of many enzymes, regulation of water uptake, and overall plant metabolism. It also contributes to disease resistance and stress tolerance.

Effects: Enhances plant vigor, supports flowering and fruiting, and improves resistance to diseases and environmental stress.

The NPK ratio on fertilizer labels indicates the relative proportions of nitrogen, phosphorus, and potassium in the product. For example, a fertilizer with a label of 10-20-10 means it contains %10 nitrogen, %20 phosphorus, and %10 potassium by weight.

Packaging:

- 1000kg jumbo bags
- 50Kg

NPK
FERTILIZERS

FERTILIZERS

DAP stands for Diammonium Phosphate, which is a type of fertilizer. It is a highly water-soluble source of nitrogen and phosphorus, two essential nutrients for plant growth.

Composition: DAP is composed of ammonium ions, which provide nitrogen, and phosphate ions which provide phosphorus.

Nutrient Content: DAP typically has a high concentration of both nitrogen and phosphorus. The nitrogen content is usually in the ammonium form, which is readily available to plants.

Use as Fertilizer: DAP is widely used as a fertilizer in agriculture to provide essential nutrients for plant growth. The balanced ratio of nitrogen and phosphorus makes it suitable for various crops, especially during the early stages of plant development.

Water Solubility: DAP is highly water-soluble, making it easy to apply through irrigation systems or as a foliar spray. This allows for efficient nutrient uptake by plants.

Fertilizer Analysis: The fertilizer analysis or grade of DAP is usually expressed as a series of three numbers on the fertilizer bag, representing the percentage by weight of nitrogen, phosphorus (as P_2O_5), and potassium (as K_2O). However, since DAP does not contain potassium, the third number is often zero. For example, a common grade for DAP might be 0-46-18, indicating %18 nitrogen and %46 phosphorus (as P_2O_5).

Packaging:

- 1000kg jumbo bags
- 50Kg

DAP
FERTILIZERS

RAW MATERIALS

Sulphur is one of the earth abundant elements with the chemical symbol S. It is known with its yellow bright color. In industry it is widely used in sulphuric acid production, agricultural, medical, food, paper and rubber industry. Previously it is sourced from volcanic zones on earth surface or a drilling process using hot air steam. However, recently it is recovered from oil refinery process.

SULPHUR

RAW MATERIALS

Soda ash, also known as sodium carbonate, is a white, odorless powder or granular substance with the chemical formula Na_2CO_3 . It is a crucial industrial chemical used in various applications.

Manufacturing of Glass: One of the primary uses of soda ash is in the production of glass. It is a key component in the glass-making process, helping to lower the melting point of the sand used to make glass.

Chemical Industry: Soda ash is used in the manufacturing of various chemicals, including sodium phosphates, sodium silicates, and sodium bicarbonate.

Water Treatment: It is employed in water treatment processes to adjust pH levels and soften water.

Detergents and Soaps: It is a common ingredient in detergents and soaps, aiding in the removal of grease and stains.

Metallurgy: Soda ash is used in the metallurgical industry for various purposes, such as ore flotation and refining processes.

Packaging:

- 1000kg jumbo bags
- 50Kg

SODA ASH

DENSE & LIGHT

RAW MATERIALS

Base oil, also known as base stock, is the primary component of lubricating oils used in various applications such as automotive engines, industrial machinery, and hydraulic systems. Base oils serve as the foundation for formulating lubricants, providing the necessary lubricating properties to reduce friction and wear between moving parts.

Types of Base Oils:

Mineral Base Oils: *These are derived from crude oil and are classified based on their viscosity index (VI). They include Group I, Group II, and Group III oils, with Group III having a higher level of refinement and better performance characteristics.*

Synthetic Base Oils: *These are chemically engineered oils that offer superior performance in terms of stability, temperature resistance, and oxidation resistance. Common synthetic base oils include PAOs, esters, polyalkylene glycols (PAGs), and more.*

REMELTED LEAD

Remelted lead typically refers to lead that has been melted down from scrap or recycled sources to be reused in various applications. It's a common practice in industries where lead is used, such as in batteries, construction, and manufacturing. Recycling lead helps to reduce the demand for newly mined lead ore, conserves resources, and reduces environmental impact. However, it's important to ensure proper handling and disposal of lead due to its toxicity.

REMELTED LEAD

ISO CERTIFICATIONS

Didar Asia has been assessed by Independent Auditors and found to be compliant with the following requirements:
