barriers, shields, guide posts, cones, bumpers

LITOLAN tanks are used for storage, accumulation and transportation of bulk and liquid substances, including chemicals, food, diesel fuel, etc.

The outer layer provides protection against UV radiation and prevents the destruction of products

MATERIAL IS RESISTANT TO CORROSION, MOULD AND ROT

LID WITH BREATHING VALVE

OPERATING TEMPERATURE FROM -35 TO 60°C

VERSATILE IN USE - SUITABLE FOR DIFFERENT TYPES OF PRODUCTS AND SUBSTANCES

HIGH MECHANICAL RESISTANCE AND NO CORROSION

DURABILITY - SERVICE LIFE OF MORE THAN 50 YEARS

ENVIRONMENTALLY FRIENDLY - PLASTIC CONTAINERS ARE RECYCLABLE

Additional equipment for containers

Fittings and tie-ins, float and ball valves, bushings, lids with breathing valves, etc. The equipment may vary depending on the specific model and purpose of the plastic container.

The products are manufactured using modern production technologies.
The tanks have a food-safe inner layer that is neutral when interacting with liquids, acids, etc.

Conical tanks

Used by farm households and industrial enterprises.

Particularly useful for vertical filling of containers, boxes and bags with dosed content delivery

from 300 to 16 500 l

Transportation tanks

Transportation tanks are widely used for transporting various foodstuffs, chemicals, as well as urea-ammonia solution (UAN) and diesel fuel.

Used by farms, industrial enterprises, etc

PREFABRICATED
CONTAINERS FOR
TRANSPORTATION

from 1200 to 22000 l

Casks and Barrels

Casks and barrels are used for a variety of purposes in industry and households. They are widely used for storing both food and chemicals.

DURABILITY

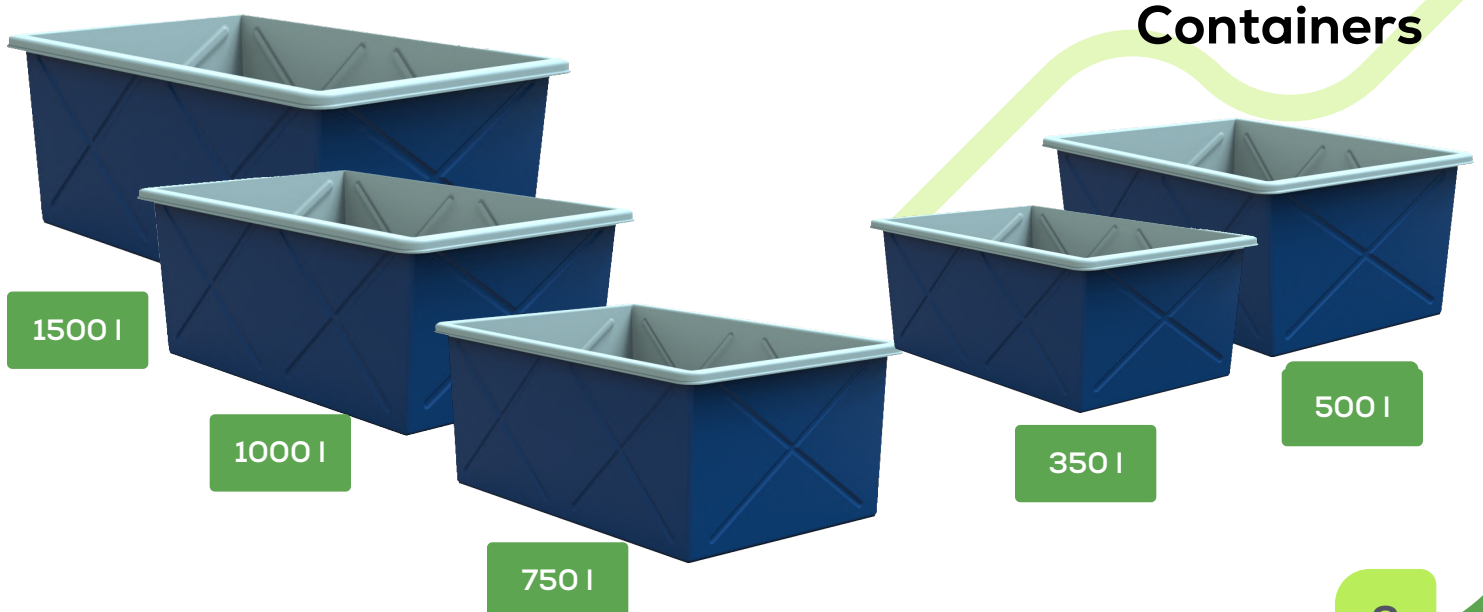

LIGHTNESS

VERSATILITY

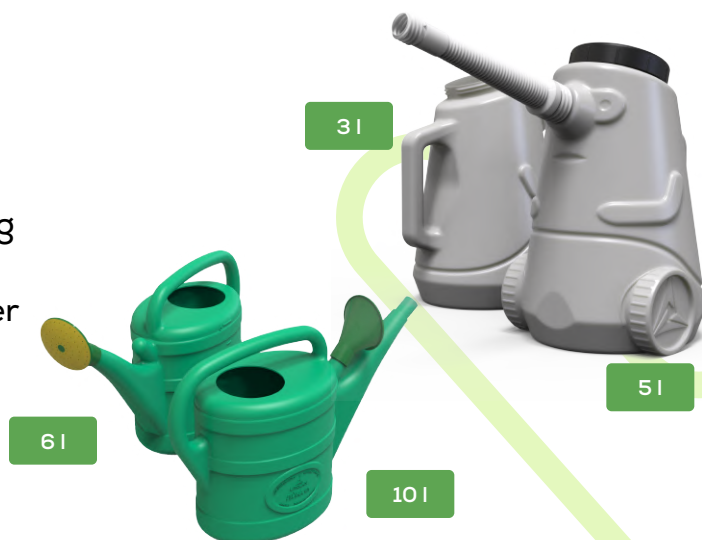

Containers

Plastic products such as watering cans, shower tanks and hand basins can be useful tools for your garden and vegetable plot. Plastic products are made of high-strength plastic that is resistant to mechanical stress and weather conditions and have an antibacterial inner layer. They are easy to use, which makes them popular among gardeners and vegetable growers.

Watering cans

Plastic watering cans are used for watering plants in the garden. They are lightweight, robust and easy to use and distribute water evenly in beds and flower gardens. The oiler funnel has a long spout for easy filling. It is ideal for filling technical fluids.

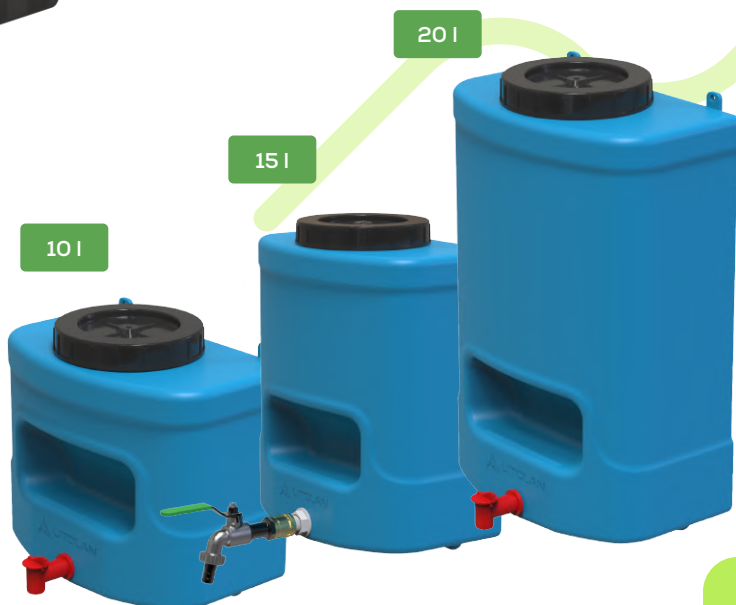

Shower tanks

A shower tank allows you to create a comfortable and functional place to bathe. The water in the tank is heated naturally by solar energy; thanks to the dark colour of the tank, the water heats up quickly enough in the sun. A shower head is included.

Washbasin

Plastic washbasins are a real salvation in those private homes where there is no centralised water supply. The washbasins have special fixing fasteners and a wide neck. The tap is supplied as a set

LITOLAN sprayers are characterised by high performance and efficiency. A wide range of volumes and a variety of equipment.

Bag and trolley

For easy handling and transport of sprayers

Caisson

This is a product designed to protect the well and underground water supply systems from external influences. It is widely used in the organisation of autonomous water supply systems. It has a wide neck for maintenance. Tightness, lightness of construction, absence of corrosion and ease of installation are the main advantages of the caisson.

Well for water meters

It is used to install water meters and provide access to them to read water consumption data.

↔ from 75 to 530 l

Grease separator

It is designed for wastewater treatment of insoluble fats of plant and animal origin. The fat separator can be used in public catering establishments (cafes, restaurants, canteens), commercial kitchens of supermarkets, fast food establishments, butcher shops. It helps to prevent clogging of the sewerage system and ensures more efficient wastewater treatment.

EASY TO INSTALL

DURABILITY

EFFICIENCY

Cesspools

They are designed for temporary storage of untreated wastewater, especially in places where there is no access to sewage or septic systems. They require periodic cleaning and pumping out.

↖ ↗
↘ ↙ 3000 and 5000 l

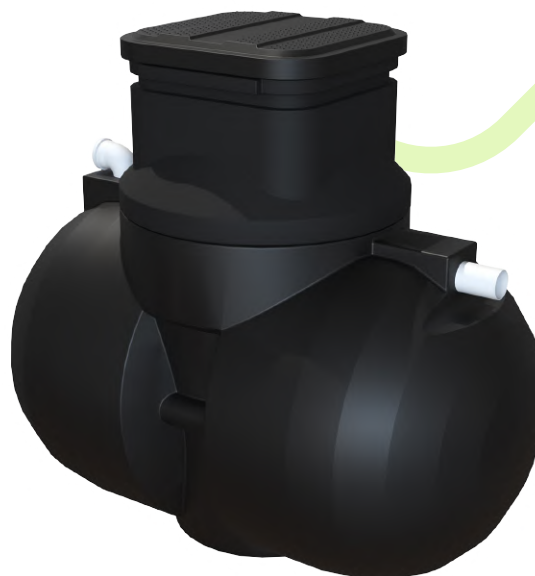

Plastic septic tanks

Equipment for the primary treatment of wastewater from homes and buildings. They separate solids and liquids, allowing the treated water to infiltrate safely into the ground. Includes a biofilter basket.

↖ ↗
↘ ↙ 2000 and 3000 l

Biological wastewater treatment plant

LITOLAN's innovative equipment for deep treatment of domestic and similar industrial wastewater in places where there is no possibility of sewage disposal to the central sewerage system. The plant is a local wastewater treatment facility that effectively treats wastewater and does not require any troublesome maintenance.

Plastic fences manufactured by "LITOLAN" are intended for use in places where road and emergency works are carried out, including on public roads and roads in populated areas. They are installed in order to safely prevent unintentional entry into the fenced area.

**STRENGTH****DURABILITY****EASY TO INSTALL****GOOD VISIBILITY**

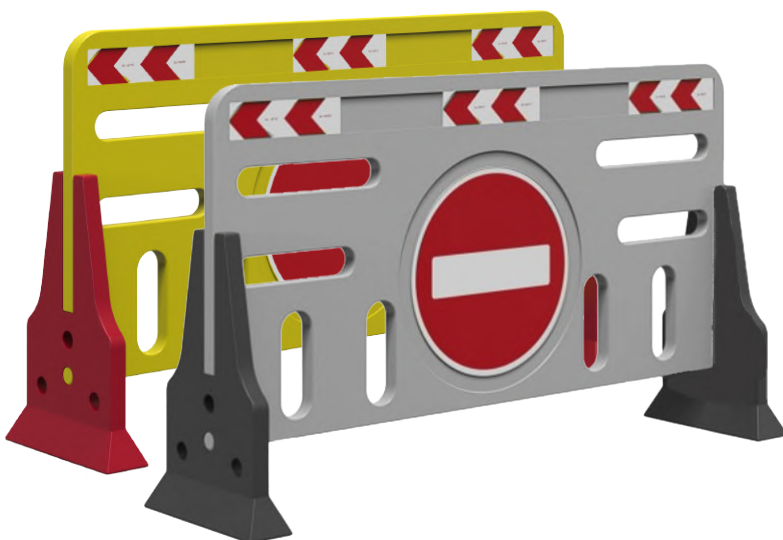

Guiding milestones

Plastic milestones are used for marking road boundaries, longitudinal marking of lane directions, delineation of road works on the carriageway and roadside, and marking of necessary points on construction sites. Bright colours and light elements ensure good visibility even at night.

Traffic boards

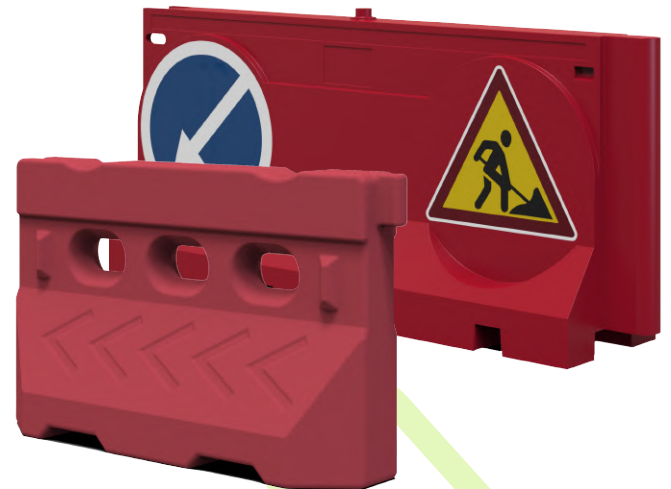

Traffic boards are used to protect drivers and pedestrians by preventing entry to dangerous areas of the road, marking dangerous objects and places with repair work. They are made of durable plastic, the fences can withstand mechanical stress and weather conditions without deformation. Plastic road signs are durable, easy to use and resistant to environmental influences.

Plastic barriers

Plastic drainage barriers are used to mark traffic flows in both oncoming and opposite directions, preventing collisions and ensuring safety on roads and construction sites.

They are lightweight and quick to install, making them easy to move and use.

Plastic cones

Plastic cones are used to mark temporary hazardous road sections, repair works and traffic changes. The cones are lightweight and manoeuvrable, making them easy to carry and install.

Sand box

The sand and grit box with dispenser is used for storing and dispensing grit, such as salt or sand/salt mixture, which is used for spreading on roads to combat icing and improve transport conditions in winter.

PROTECTION

AND DIRT

ROBUST HOUSING

DISPENSER

Plastic playgrounds

SAFE AND COLOURFUL COMPLEXES FOR CHILDREN

These are specially designed play sets made of high-strength and child-safe plastic. They include a variety of elements and structures for the active and creative development of children.

Plastic playgrounds help to develop children's physical and social skills, stimulate their creativity and active lifestyle. The plastic construction makes it easy to maintain and clean the platforms, which makes them practical and convenient to use. The absence of joints and chips makes it impossible to get injured. The plastic is very strong and durable.

Tables and chairs

They are used in children's rooms, schools, kindergartens, and play areas.

Children's chairs have a convenient shape, optimal height and dimensions for comfortable sitting. They have smooth corners and edges, which eliminates traumatic situations.

The chairs can withstand a significant load of more than 100 kg and do not break, making them durable.

Children's chairs are available in bright colours that attract attention and create a cheerful atmosphere in children's rooms or play areas.

Moorings and pontoons

- Plastic moorings and pontoon systems are innovative structures designed to create stable and durable floating platforms and docks.
- The moorings are easy to assemble and install, saving time and resources during installation.
- The moorings have a modular structure, which makes it easy to set up and change sizes and configurations depending on needs.
- The material used in the moorings is environmentally friendly and corrosion-resistant, making them an ideal choice for use in the water environment.
- The moorings do not require regular painting or other specialised maintenance measures, which simplifies their maintenance.
- The systems are equipped with safety features such as handrails and ladders for safe use on the water.

Waste dumps

Plastic waste dumps allow you to simplify and speed up the collection and disposal of waste arising from construction and building works

The main task of a construction waste dump is to remove waste from construction sites conveniently and safely.

The construction waste dump consists of individual sections that are attached to each other. This creates the required length of the hose, which is used to discharge construction waste safely and quickly.

Flowerpots

Outdoor plastic flowerpots have an attractive decorative appearance and are available in a variety of sizes, shapes and designs. The special design of the flowerpots allows you to water the plants once every two weeks, while the liquid will be evenly distributed over the soil mixture. The materials of the products are frost-resistant, not destroyed by the sun and moisture, and resistant to weather conditions.

Accessories for tanks

The complete set of plastic tanks can vary depending on their purpose and type, but the main components and elements of the complete set are as follows:

TANK TIE-INS

FLOAT TAPS

BALL VALVES

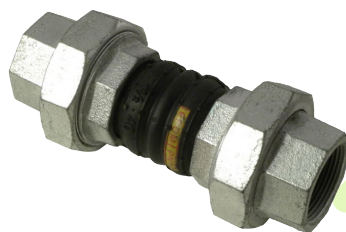

MEASUREMENT LEVELS

TIE DOWN STRAPS

**BORE BUSHINGS AND
FLANGES**

VIBRATING INSERTS
