

Paper Straws The World's **BEST** Paper Straw

Official Supplier
Mc Donalds & Starbucks

BIO-PLASTIC

There's no getting around it: Bio-Plastic straws pollute just like plastic. They don't break down in landfills and end up in our waterways. Bio-Plastic straws are not recyclable and can actually contaminate other plastics that are recyclable. If you cannot consume a beverage without a straw, paper straws remain the most viable, environmentally friendly option for restaurants, venues and establishments.

BIO-PLASTIC/PLANT/PLA STRAWS:

BULTRADING PAPER STRAWS:

are considered a sustainable alternative to plastic straws, but disposing of any type of PLA, bioplastic or "plant-based" plastic is **no different** than throwing away a regular straw.

ARE 100% COMPOSTABLE
AND MARINE FRIENDLY

react exactly like plastic straws in a normal waste stream. It's almost *impossible* for them to decompose in a landfill, and if they do, it can take over 1,000 years.

CAN DECOMPOSE IN JUST
45-60 DAYS

behave like "regular" plastic in waterways or oceans, often harming, endangering or killing wildlife and fish.

ARE EARTH & MARINE FRIENDLY
NATURALLY DEGRADABLE,
FDA/EU COMPLIANT, AND COMPOSTABLE.

only break down when all oxygen is removed, and temperatures are constantly above 140°F for at least 10 days. This occurs in a commercial composting site only.

BULTRADING PAPER STRAWS REQUIRE
NO SPECIAL ENVIRONMENT
OR CONDITIONS TO BREAK DOWN SAFELY
